To whom it may concern:

Airtraq LLC desires to have the Airwave RF module, AWM661TX, tested for approval in Airtraq's host specific configuration, M/N A-305 / ATQ-305. The A-305 / ATQ-305 is a wireless camera.

**FCC ID**

FCC ID: VGO-CAM58.

**IC ID**

IC:7219A-CAM58

**Applicable Rule parts**

FCC 15.249, 15.107 and 15.207.

**Type of Equipment Approval**

Original certification

**Radio Description and Application**

The Airtraq camera is used to capture and transmit images from the optical laryngoscope, Airtraq. The Airtraq camera works in conjunction with a wireless receiver display and recorder, models A-335 and ATQ-335. The camera can transmit a wireless video signal to the receiver.

The clip-on camera can be connected via a hard cable to an external monitor, during which time the wireless signal is stopped or the wireless signal can be received by the wireless receiver which is then connected to an external monitor via a cable.

The device is battery operated. There are provisions to indirectly connect it to the AC mains through either a standalone charger or when sitting in the wireless receiver's charging cradle. However, the radio is unable to transit while charging. Therefore, the radio's RF exposure condition is portable.

Sincerely,
